INTRODUCTION

The Lightpaper provides comprehensive information about the Rare Jewel NFT project ecosystem, including decentralized value assets such as NFTs, Serious Games, Token Economy, and Dapp. It helps users to follow the development of the project and to understand how the decentralized economy works in the most diverse digital spheres.

The way the project is developed requires a lot of attention, dedication and responsibility, regarding transparency and the objectives to be achieved, valuing the position of each of the parties involved and interested in being part of something new, something that can really influence others. projects and follow a path of transformation of the concepts of alienation, rooted like noxious weeds, from the ground to the top of contemporary society.

It is essential to be clear and objective people, setting goals and dynamic solutions, to achieve the results in a way that is great for the whole community that is dedicated to the creative beauties of the Metaverse, seeking partnerships and realizations in the personal, professional and sentimental field.

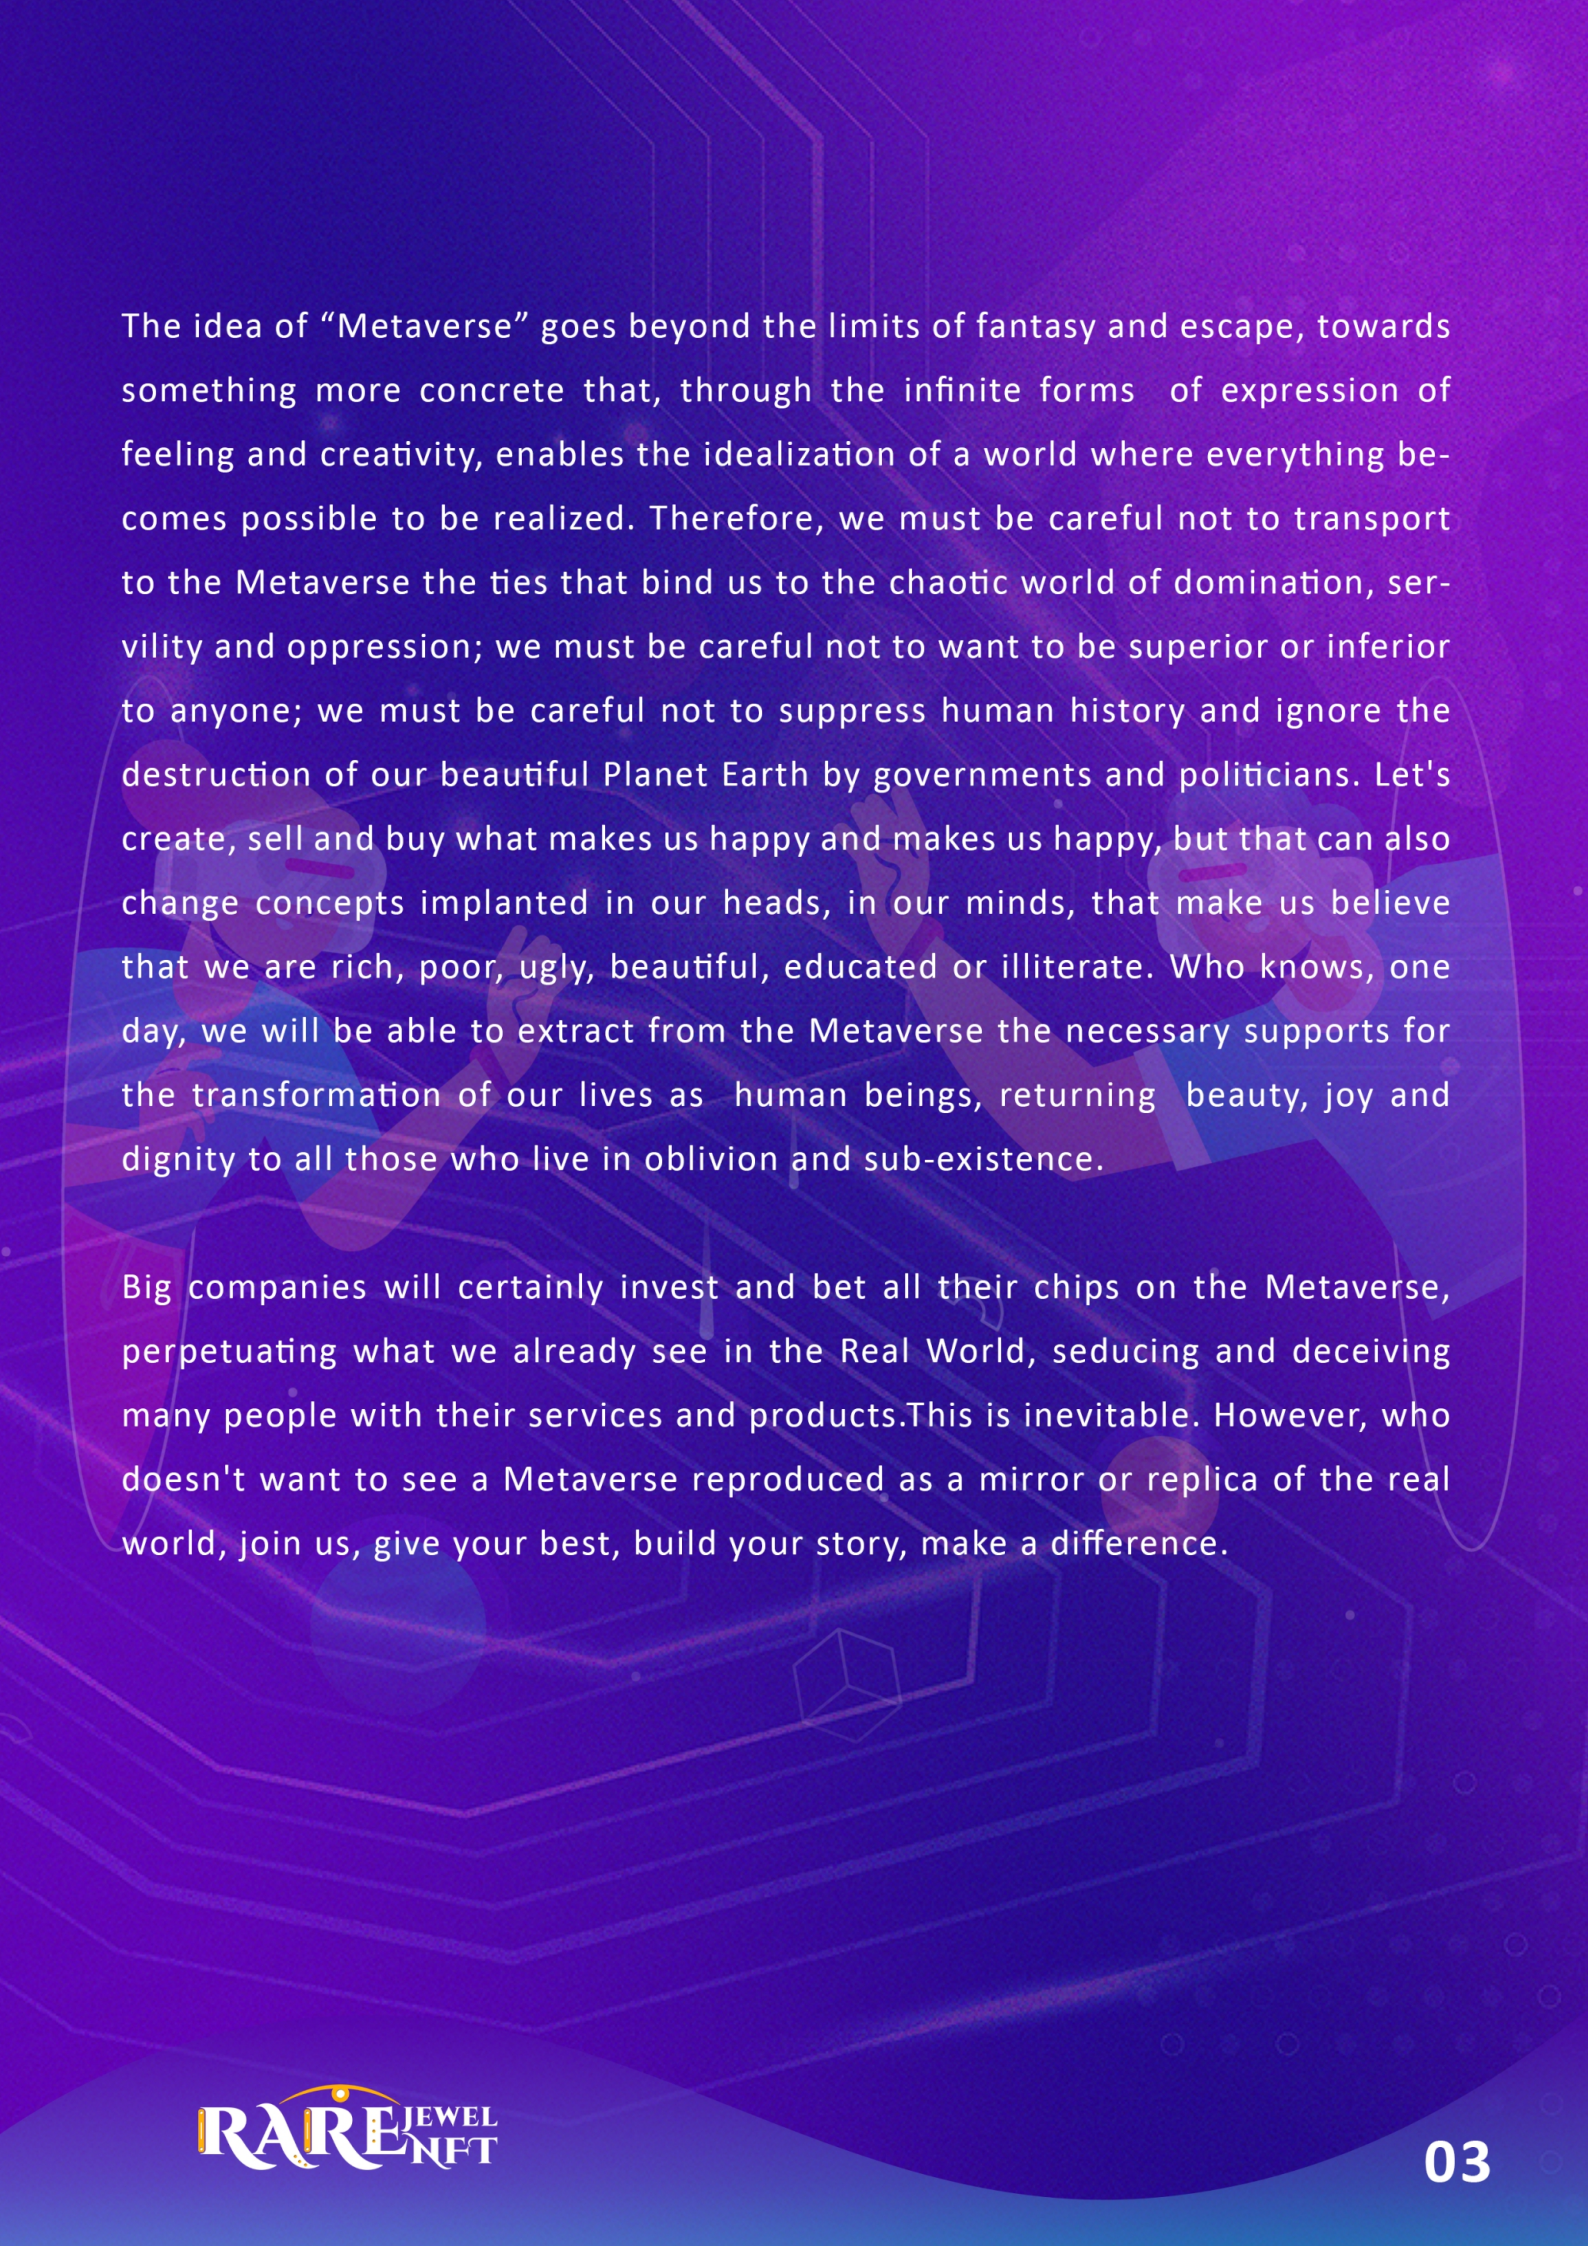

ABOUT THE PROJECT

Welcome to the socialization of the Metaverse, as an imaginary part and also as a reality projected from concepts and idealizations of freedom, of decentralization of creation and breaking with the rules that are imposed on all of us by the models of acceptance of mundane, real, cruel and chaotic society.

Rare Jewel NFT aims to become the first libertarian project, decentralized and compatible with various virtual technologies, capable of providing a variety of quality services (Dapp, Serious games play-to-earn, Cryptocurrency and NFTs). The autonomous, reliable and secure services communicate with various networks in a decentralized way, such as: multiplatforms, marketplaces, blockchains, metaverses and exchanges. These characteristics are unique and contribute to the long-term appreciation of the project. It is a new form of monetary economy where your crypto assets will no longer be trapped within a single centralized platform.

By communicating with many other systems, the project will result in a revolutionary disruption, with the central aim of helping people and becoming one of the most active ecosystems in the cryptocurrency industry. It is genuine freedom.

(to be continued)

The idea of “Metaverse” goes beyond the limits of fantasy and escape, towards something more concrete that, through the infinite forms of expression of feeling and creativity, enables the idealization of a world where everything becomes possible to be realized. Therefore, we must be careful not to transport to the Metaverse the ties that bind us to the chaotic world of domination, servility and oppression; we must be careful not to want to be superior or inferior to anyone; we must be careful not to suppress human history and ignore the destruction of our beautiful Planet Earth by governments and politicians. Let's create, sell and buy what makes us happy and makes us happy, but that can also change concepts implanted in our heads, in our minds, that make us believe that we are rich, poor, ugly, beautiful, educated or illiterate. Who knows, one day, we will be able to extract from the Metaverse the necessary supports for the transformation of our lives as human beings, returning beauty, joy and dignity to all those who live in oblivion and sub-existence.

Big companies will certainly invest and bet all their chips on the Metaverse, perpetuating what we already see in the Real World, seducing and deceiving many people with their services and products. This is inevitable. However, who doesn't want to see a Metaverse reproduced as a mirror or replica of the real world, join us, give your best, build your story, make a difference.

ECOSYSTEM

We are proposing a decentralized financial ecosystem that will allow direct and fair access to available resources in the country and in the world, combating widespread slavery, assuring the community the opportunity to give opinions and to be involved in decision-making, pertinent to the resources that will be destined to the people with depression around the world.

We know that depression affects a wide range of people and among them are those who develop chemical dependencies; those who suffer financial losses, both through physical currencies and cryptocurrencies; people who suffer heartbreaks; people who suffer loss of family members, etc. So, the project promotes a Social Action to make its contribution in the real world, directing part of the resources to institutions that deal with depression. The way in which these resources will be used will be discussed among the community, making common sense and a libertarian conscience prevail. We have the opportunity to give our best, to generate a system of cooperation and solidarity, emphasizing the importance that the individual in need has for each of us.

Closing our eyes and ignoring the situation of suffering, agony, despair and inhumanity that massacres our fellow human beings is an attitude of extreme selfishness and lack of love. Let's roll up our sleeves and embrace a just cause and not expect governments to do for us what they've never done: protect our right to citizenship.

DIGITAL ASSETS

One of the well-defined proposals of the project is to contemplate the most diverse aspects of the decentralized digital world, promoting the quality and appreciation of digital assets, such as NFTs, Dapps, Games and others. The aim is to provide truly transformative and unforgettable experiences to users, making the metaverse a better than conventional, pleasant and diverse environment, bringing reality closer to the dream and transforming the dream into reality.

The user is the most important and integrating part of the project and will have an active participation in the progress of implementations and actions. The digital assets of value really belong to the users and the NFTs, Games and Dapp are non-fungible tokens that can be exported and traded in open markets. All transactions are recorded on the blockchain to ensure that there is no centralized party capable of generating any kind of fraud.

There are two types of NFTs within the project:

- The first one is pre-made in the games by the players themselves, being fully and perpetually owned by each player and only he will decide its use, with which he will also passively produce income.
- The second is a type of NFT which are Certificates of Ownership and which can be purchased on marketplaces.

The Serious Game issues a native token called Rare Jewel NFT (RJN) as a governance token, as well as the currency needed to update tools and trade on marketplaces. It is our default currency. The games will also have in their constitution, NFTs that will serve to farm and earn cryptocurrencies.

THE CRYPTOCURRENCY

Rare Jewel Nft, Token (RJN) is the governance token of the Rare Jewel NFT ecosystem, issued on the Tron Network Blockchain.

The total supply of RJN is 1 trillion tokens.

In addition to the possibility of earning the token with Serious Games, it will also be possible to cloud mine the cryptocurrency through a decentralized application.

CRYPTOCURRENCY ALLOCATION

Listing on an exchange: 20%;

Liquidity: 5%;

For the game: 40%;

Developers: 20%;

Marketing: 5%;

Donations: 10%.

ROADMAP

THE ROADMAP WILL BE UPDATED BASED ON THE PRODUCT AND MARKET SITUATION.

April - 2022

Launch of the official website; Social networks; LightPaper and Airdrop.

June - 2022

NFT listing (OpenSea); CoinGecko; CoinMarketCap;

July - 2022

Airdrop Prize Draw; Launching the Cloud Mining Dapp on Google Play; Donations to Institutions that treat depression and to Organizations that help homeless people with housing, employment and psychological assistance.

September - 2022

Game launch (play to win); Services deployed and integrated in metaverses (NFT and Cryptocurrencies).

October - 2022

New phase of the game play-to-win in metaverses;

December - 2022

New NFT Collections; Cryptocurrency listing on major exchanges.
